USER ACCEPTANCE TESTING (UAT) — FEATURE CHECKLIST

Document version 1.0 | Generated: 03 May 2026 14:31

How to use: Tick **Pass** when the scenario is verified. Record defects, screen references, or dataset notes in **Comments**. **Status X** = not executable in this UAT cycle (blocked on external API). N/A = not deployed for this client.

#	ID	Feature / area	Detailed UAT — what to verify	Pass ☐	Status	Comments
1. Authentication, access & session						
1	SEC-01	User login	Valid user can log in with correct credentials; invalid password is rejected with a clear message. Session persists as expected across navigation. Logout clears the session and prevents back-button access to protected pages.	☐	—	
2	SEC-02	Password recovery	Forgot-password flow sends OTP or reset link as configured. User can set a new password and log in with it. Expired or reused tokens are rejected.	☐	—	
3	SEC-03	Branch switching	Users assigned to multiple branches can switch active branch where enabled. Data scope (loans, reports) respects the selected branch according to business rules.	☐	—	
4	SEC-04	Role-based permissions	Menus and actions hidden or disabled when the role lacks permission. Attempting direct URL access without permission returns 403 or redirect as designed.	☐	—	
5	SEC-05	Subscription / access gate	If subscription is expired, restricted users see the subscription-expired experience and cannot reach core modules until renewal (per product rules).	☐	—	
2. Organisation — company, branches, staff						
6	ORG-01	Company profile	Company name, contacts, and branding (logo) display correctly on dashboards and PDF reports. Updates to company settings persist after save.	☐	—	
7	ORG-02	Branches	Branches can be created and edited (per permission). Users are assignable to one or more branches. Loan and report filters list only permitted branches.	☐	—	
8	ORG-03	Users & roles	Admin can create users, assign roles, and assign branches. Deactivated users cannot log in. Role changes take effect without stale permission cache issues.	☐	—	
3. Dashboard & analytics						
9	DAS-01	Executive dashboard	KPI tiles and charts load without error for a typical dataset. Figures reconcile at high level with underlying loan/accounting data for a sample spot-check.	☐	—	
10	DAS-02	Arrears / classification widgets	Loans-by-bucket or arrears widgets respect configured arrears classifications. DPD and principal-in-arrears match loan-detail logic for sampled loans.	☐	—	
11	DAS-03	Loan analytics screen	Dedicated analytics views/API return KPIs and charts; filters work; export or drill-down behaves as documented.	☐	—	
4. Customers						
12	CUS-01	Customer registration	New customer can be captured with mandatory fields validated. Duplicates (e.g. phone/NID if enforced) are handled per policy.	☐	—	
13	CUS-02	Customer profile & edit	Profile view shows contact, IDs, and relationships. Edits save correctly; audit or history shows changes where implemented.	☐	—	
14	CUS-03	Documents & KYC	Required document types can be uploaded, viewed, and replaced. File size/type restrictions enforced. Download works for authorised users.	☐	—	
15	CUS-04	Customer approval workflow	If registration approval is used, approver can approve/reject; customer status updates and downstream loan application rules respect approved state.	☐	—	
5. Loan products & configuration						
16	PRD-01	Loan product setup	Products define amount limits, tenor, interest method, fees, and repayment frequency correctly. Inactive products cannot be selected for new applications.	☐	—	

#	ID	Feature / area	Detailed UAT — what to verify	Pass □	Status	Comments
17	PRD-02	Interest & schedule preview	Calculator or schedule preview matches disbursement schedule after loan creation for a test case (flat/reducing as applicable).	□	—	
18	PRD-03	Fees, penalties & charges	Configured fees and penalties appear on schedule or transactions as designed; waivers (if any) follow approval rules.	□	—	
6. Loan lifecycle — application to disbursement						
19	LN-01	Loan application capture	Application captures product, amount, tenor, purpose, guarantors/collateral as required. Validation prevents incomplete submit.	□	—	
20	LN-02	Approval / rejection	Workflow states (applied, approved, rejected) display correctly. Notifications or task lists (if any) align with state changes.	□	—	
21	LN-03	Disbursement	Disbursement posts correct principal, date, and branch. Loan status becomes active; schedule lines match approved terms.	□	—	
22	LN-04	Schedule integrity	Total scheduled principal equals disbursed amount (within rounding rules). Due dates follow product frequency; first instalment date correct.	□	—	
23	LN-05	Loan restructuring / top-up / write-off	If enabled: restructure or top-up recalculates schedule and balances; write-off requires authorisation and reflects in balances and reports.	□	—	
7. Repayments, arrears & penalties						
24	REP-01	Record repayment	Payment allocates to principal, interest, fees per waterfall. Outstanding and schedule lines update; receipt reference stored.	□	—	
25	REP-02	Partial & advance payments	Partial payment applies correctly; advance handling (if supported) does not corrupt schedule or interest accrual.	□	—	
26	REP-03	Arrears calculation	Days in arrears and arrears amount on loan match manual calculation for sampled overdue loans (including first-overdue-instalment rule if used).	□	—	
27	REP-04	Penalties on overdue lines	Penalties accrue or post per configuration; reversal or adjustment respects permissions.	□	—	
8. Groups, collateral & cash collateral						
28	GRP-01	Group & members	Group created; members added/removed; group loans linked to group; group repayment or reporting (if applicable) works on sample data.	□	—	
29	COL-01	Loan collateral & guarantors	Collateral/guarantor records attach to loan; documents stored; removal follows business rules.	□	—	
30	COL-02	Cash collateral	Deposit and withdrawal transactions post with correct balances; statements or prints match ledger.	□	—	
9. Accounting core						
31	ACC-01	Chart of accounts	Accounts browsable; new accounts (if permitted) post correctly; invalid combinations prevented.	□	—	
32	ACC-02	Journals & entries	Journal creation, balanced lines, save draft, submit for approval, post, and reverse (if enabled) all behave correctly; GL balances update.	□	—	
33	ACC-03	Payment & receipt vouchers	Voucher lifecycle (create, approve, reject) works; posted vouchers appear in cash book / GL as expected.	□	—	
34	ACC-04	Bank accounts & reconciliation	Bank transactions import or capture; reconciliation clears matched items; unreconciled report accurate.	□	—	
10. Reports — loans & portfolio						
35	RPT-01	Disbursement & repayment reports	Date and branch filters return expected rows; Excel/PDF export opens and matches on-screen totals for a test period.	□	—	
36	RPT-02	Portfolio, PAR, NPL, aging	Sample loans appear in correct PAR/NPL/aging buckets; totals tie to loan register for the same filter set.	□	—	
37	RPT-03	Loan arrears & provisioning / classification	Arrears and portfolio-provisioning reports respect arrears classifications; provision amounts match principal-in-arrears × rate for sampled loans.	□	—	
38	RPT-04	Expected vs collected	Expected collections from schedule compare to actual receipts for selected period; variances explainable.	□	—	
11. Reports — financial statements						
39	FIN-01	Trial balance & GL	Trial balance balances; drill-down to GL lines matches journal postings for sampled accounts.	□	—	
40	FIN-02	Balance sheet & income statement	Statements generate for period; signs and classifications correct; comparative period (if used) consistent.	□	—	
41	FIN-03	Cash book & cash flow	Cash movements agree with bank/cash accounts; cash flow sections reconcile to opening/closing balances.	□	—	
12. Settings, communications & audit						
42	SET-01	System & loan settings	Interest, fees, penalties, payment terms, file types, and SMS templates save and take effect on new transactions where applicable.	□	—	
43	SET-02	Arrears classifications	Buckets (DPD ranges, provision %) configurable; dashboard and reports use active set only.	□	—	
44	SET-03	Activity / audit logs	Sensitive actions logged with user, time, and change summary; log view filterable and exportable if offered.	□	—	
13. Customer API (mobile / partner)						

#	ID	Feature / area	Detailed UAT — what to verify	Pass ☐	Status	Comments
45	API-01	Customer auth & profile	API login returns token or session per spec; profile endpoint returns same data as back-office for test customer.	☐	—	
46	API-02	Loans & schedule visibility	Loans list and loan detail match back-office balances and schedule for the authenticated customer.	☐	—	
47	API-03	Complaints & loan application via API	Submit complaint and submit loan application create records visible in back-office with correct customer linkage.	☐	—	
14. External integrations (API-dependent)						
48	INT-UTU	Utumishi integration	Planned: automated verification of employment / salary data with Utumishi (Government payroll) for credit decisions and limits. UAT blocked until Utumishi API credentials, endpoints, and payload mapping are delivered and configured in a non-production environment.	☐	X	Wait API
49	INT-NIDA	NIDA integration	Planned: fetch or validate National ID (NIDA) biographic data and photo for KYC, deduplication, and regulatory alignment. UAT blocked until NIDA API access, consent workflow, and error-handling rules are confirmed and implemented.	☐	X	Wait API
